(54) IMAGE PHOTOGRAPHING DEVICE

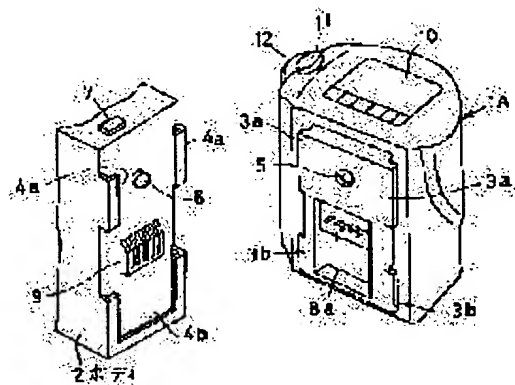

(57)Abstract:

PROBLEM TO BE SOLVED: To improve usability and portability by attachably and detachably providing a device body with grips and limiting the functions of an image photographing device by the kinds of the grip parts.

SOLUTION: This image photographing device has a first image pickup means constituted in a silver salt photographic image pickup system and a second image pickup means constituted in the image pickup system for

electrophotography. The device is so constituted that various kinds of the grips for stably supporting the device body at the time of photographing may be attachably and detachably mounted at the one flank part of the body 2.

One group among plural kinds of the grips is constituted to have the functions dealing with only the first image pickup means and the other group to have the function dealing with both of the first and second image pickup means. The grip 1A has the function to deal with only the first image pickup means for silver salt photographing and is provided with an operation display section 10, a release button 11 for silver salt photographing and an AV-TV changeover dial 12. Which of the grips is mounted is detectable by connection of the signal terminals 9, 8a on the body side and the grip side.
